

Rodless Cylinder

# APR Series

∅16, ∅20, ∅25, ∅32, ∅40, ∅50, ∅63

## Variety of Options

Can select additional options according to customer's application.

※ When using the LM Guide type, attach the workpiece to the table on the LM Guide side to prevent the workpiece from shaking.

## Switch rails with double-sided mounting

Compact auto switch can be mounted on both sides without separated mechanism

Centralized port system and 3-way piping available

## Floating Bracket

Used in combination with other separate external guides

## Stroke Adjustment Unit

One sided and two sided strokes can be adjusted

Adjustment bolt

Adjustment bolt +  
Low load shock  
absorber

Adjustment bolt  
+ High load  
shock absorber

## Side Bracket

Long stroke cylinder tube deflection (warp) prevention

# APR Series

## RODLESS CYLINDER

Bore size : Ø16, Ø20, Ø25, Ø32, Ø40, Ø50, Ø63

- Implemented maximum stroke of 5,000mm
- High rigidity and durability
- Reduced in weight
- More options added such as LM Guide and shock absorber

Symbols

## How to order

### 1 Secondary Battery type

Blank : Standard type  
 2B : Secondary Battery type  
 ※ Please inquire when ordering .

### 2 Guide type

A : Basic type  
 B : External guide  
 C : LM guide mounted  
 (Not available for Ø50, Ø63)

### 3 Bore size

16 : 16mm  
 20 : 20mm  
 25 : 25mm  
 32 : 32mm  
 40 : 40mm  
 50 : 50mm  
 63 : 63mm

### 4 Maximum stroke length (mm)

A, B Type / C Type  
 Ø16 : 3,000 / 1,000  
 Ø20 : 3,000 / 1,000  
 Ø25 : 5,000 / 1,000  
 Ø32 : 5,000 / 1,000  
 Ø40 : 5,000 / 2,000  
 Ø50 : 5,000 / -  
 Ø63 : 5,000 / -  
 ※ Please contact us for longer than maximum Stroke length.

### 5-1 Stroke adjustment unit(1)

Blank : None  
 B1 : Shock absorber (One side)  
 B2 : Shock absorber (Both-sides)\*  
 ※ Only applicable to basic type  
 \* B2 option only available for bore sizes 16-40mm

### 5-2 Stroke adjustment unit(2)

Please refer to the installation preference  
 ※ Adjustment unit(1) and (2) cannot be used together

### 6 Option(1)

Blank : None  
 SA : SIDE SUPPORT A type  
 SB : SIDE SUPPORT B type  
 ※ LM Guide type is not applicable  
 → Suffix symbol for options(1)  
 Blank : 1 Set (2ea)  
 N : n Sets

### 7 Option(2)

Blank : None  
 J : Floating bracket  
 (Only applicable to Basic type)

### 8 AUTO SWITCH(Micro)

Blank : No auto switch  
 W8H : Micro reed switch (Horizontal, 2 wires)  
 (Applicable for both DC24V and AC110V)  
 W9H : Micro solid state switch  
 (Horizontal, 2 wires) (DC24V)  
 → Suffix symbol for Auto switch  
 Blank : 2 pcs  
 N : N pcs

## Specification

Basic type (A Type)

External guide type (B Type)

LM guide type (C Type)

Bore size(mm)		16	20	25	32	40	50	63
Fluid		Compressed air						
Action		Double acting						
Operating pressure range (kPa)		200 ~ 800	150 ~ 800					
Ambient and fluid temperature ( )		5 ~ 60						
Cushion		Variable air cushion						
Support Type		Basic type						
Lubrication		Non-lube						
Speed (mm/s)	A Type	150 ~ 2,000			100 ~ 2,000			
	B Type	150 ~ 1,500			100 ~ 1,500			
	C Type	150 ~ 1,500			100 ~ 1,500		-	-
Port size		M5x0.8		Rc1/8		Rc1/4	Rc3/8	Rc1/2
Switch magnet		Basic : built-in						
AUTO switch		W8H(Micro reed, 2-wire), W9H(Micro solid state, 2-wire)						
Stroke length tolerance	A Type	1000 or less	+1.5 0	1000 or less , 1001~3000		+1.5 +2.0 0	3000 or greater +2.5 0	
	B Type	1001~3000	+2.0 0					
	C Type	Less 1000	+1.5 0				Less 1000 +1.5 0	1001~2000 +2.0 0

※ Ø50, Ø63 with LM Guide(C type) are not available.

## Stroke

(Unit : mm)

Type	Standard	Stroke	Max. stroke
Basic type (A Type)	16, 20	100, 200, 300, 400, 500, 600, 700, 800, 900, 1000,	3000
External guide type (B Type)	25, 32, 40, 50, 63	1200, 1400, 1600, 1800, 2000	5000
LM Guide type (C Type)	16, 20, 25, 32	100, 200, 300, 400, 500, 600, 700, 800, 900, 1000	1000
	40		2000

※ Strokes can be manufactured in 1mm increments. Please contact us for strokes beyond the maximum stroke.

※ Under 50 strokes, the capacity of the air cushion deteriorates and multiple auto switches may not be mounted.

※ Since the loadless cylinder is an air cylinder with its own sealing structure, slight external leakage exists.

The slight leakage may increase when used for intermediate shutdown of the stroke, but there are no problems in use.

## Theoretical Output

(Unit N)

Bore size (mm)	Water pressure area (mm <sup>2</sup> )	Applied Pressure (MPa)							
		0.15	0.2	0.3	0.4	0.5	0.6	0.7	0.8
16	201	30	40	60	80	101	121	141	161
20	314	47	63	94	126	157	188	220	251
25	491	74	98	147	196	245	295	344	393
32	804	121	161	241	322	402	483	563	643
40	1,257	188	251	377	503	628	754	880	1,005
50	1,963	295	393	589	785	982	1,178	1,374	1,571
63	3,117	468	623	935	1,247	1,559	1,870	2,182	2,494

## Weight Table

### [ Basic type (A Type) ]

(Unit g)

Standard	APR16A	APR20A	APR25A	APR32A	APR40A	APR50A	APR63A
Standard weight	350	680	950	1,800	3,150	5,350	9,500
Stroke per 10mm	12	20	23	35	51	80	128

### [ External guide type (B Type) ]

(Unit g)

Standard	APR16B	APR20B	APR25B	APR32B	APR40B	APR50B	APR63B
Standard weight	295	630	1000	1,900	3,400	6,000	10,630
Stroke per 10mm	12	20	23	35	51	80	128

### [ LM guide type (C Type) ]

(Unit g)

Standard	APR16C	APR20C	APR25C	APR32C	APR40C
Standard weight	521	888	1,308	2,401	4,583
Stroke per 10mm	16	20	25	39	58

### [ Option Specifications ]

(Unit g)

Model		APR16	APR20	APR25	APR32	APR40	APR50	APR63
Stroke adjustment unit (1set)	Adjustment bolt	27	49	71	137	240	414	733
	Low load	49	72	111	215	337	642	990
	High load	-	107	188	395	503	919	1396

※ Based on basic bracket standards

### Weight Calculation Method

(EX) APR32A – 200

Standard weight 1,800g

Additional weight 35/10mm stroke

Stroke 200mm stroke

Weight  $1,800 + 35 \times 20 = 2,500\text{g}$

Stroke adjustment unit mounting diagram

H1L2 mounting example

※ Short bracket and long bracket are used to fix the adjustment unit in the middle.

### Stroke adjustment unit mount symbols

Bore size		16			20			25			32			40			50			63		
Unit symbol		A	L	A	L	H	A	L	H	A	L	H	A	L	H	A	L	H	A	L	H	
Components (Shock absorber type)		Adjustment bolt	0806 + Adjustment bolt	Adjustment bolt	0806 + Adjustment bolt	1008 + Adjustment bolt	Adjustment bolt	1008 + Adjustment bolt	1415 + Adjustment bolt	Adjustment bolt	1415 + Adjustment bolt	2020 + Adjustment bolt	Adjustment bolt	1415 + Adjustment bolt	2020 + Adjustment bolt	Adjustment bolt	2020 + Adjustment bolt	2525 + Adjustment bolt	Adjustment bolt	2020 + Adjustment bolt	2525 + Adjustment bolt	
Stroke adjustment range per bracket length	Standard bracket	0 ~ -5,6			0 ~ -6			0 ~ -11,5			0 ~ -12			0 ~ -16			0 ~ -20			0 ~ -25		
	Short bracket	-5,6 ~ -11,2			-6 ~ -12			11,5 ~ -23			-12 ~ -24			-16 ~ -32			-20 ~ -40			-25 ~ -50		
	Long bracket	-11,2 ~ -16,8			-12 ~ -18			-23 ~ -34,5			-24 ~ -36			-32 ~ -48			-40 ~ -60			-50 ~ -75		

※ The stroke adjustment range is the side adjustment range when mounted on the cylinder.

※ Please note that theAir cushion capacity decreases when the stroke adjustment becomes larger due to the adjustment bolt.

※ If adjustment bolt type, the piston speed is 100-200mm/s when used outside theAir cushion range.

## Shock Absorber Specification

Model	08-06	10-08	14-15	20-20	25-25	
Total energy (Nm/cycle)	5	11	34	105	226	
Stroke (mm)	6	8	15	20	25	
Max. collision speed (m/s)	2.0					
Max. operating frequency (cycle/min)	26	21	25	8	5	
Spring force (N)	Extended	2.2	2.5	3.8	8.2	11
	Retracted	5.8	6.9	13.3	23	29
Operating temperature range ( )	-10 ~ 80					
Screw standard	M8 x P1.0	M10 x P1.0	M14 x P1.5	M20 x P1.5	M25 x P2.0	

※ The life of the shock absorber differs from that of the cylinder itself. Please refer to the shock absorber standard for the replacement standard.

### <Precautions>

※ Air cushion is standard built in for the APR series.

The air cushion is installed for the purpose of preventing the piston with large kinetic energy from touching while impacting when stopping at the stroke end.

Refer to page 24 for load weight and speed range that can be absorbed by the air cushion.

※ The stroke adjustment unit with built-in shock absorber is used for loads and speeds above the limit of the air cushion, or when the stroke adjustment requires a cushion outside the range of the air cushion.

※ If the effective stroke of the shock absorber is shortened by the stroke adjustment, the absorption capacity is greatly reduced. Therefore, when adjusting the stroke with the adjustment bolt, adjust the adjustment bolt so that it protrudes about 0.5 mm from the shock absorber (shown on the right).

63	136	158	55	80	14.8	8.5	14	9	M10x1.5

※ A set of side brackets consists of a left bracket and a right bracket.

### Guide for Side Bracket Application

※ When used with a long stroke, the cylinder tube may be bent depending on its own weight or load.

In such a case, ensure that the support distance (L) shown in the right figure is less than the graph value to support the middle position with the side bracket.

※ If the distance between the counterparts is incorrect during the installation of the cylinder tube, trouble may occur due to the mounting of the side brackets.

Also, when using long strokes involving vibration and impact, it is recommended to use the side brackets even if the spacing value is within the permissible range shown in the graph.

※ The side bracket is not for mounting and can only be used for support purposes.

※ A set of side brackets consists of a left bracket and a right bracket.

## Floating Bracket (Basic type)

APR - J Bore Size

Ø16, 20, 50, 63

(Application Example)

※ Floating brackets are only applicable for basic types.

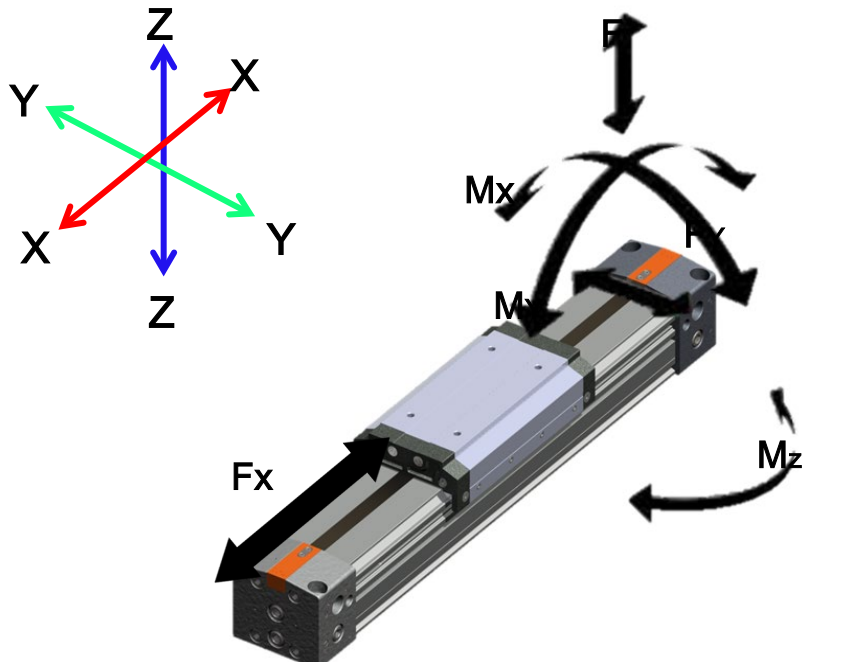

※ A set of brackets with the floating mechanism consists of a left bracket and a right bracket.

## Cylinder Model Selection

### Maximum Allowable Moment • Maximum Load Mass

Model	Bore size (mm)	Max. allowable moment (N • m)			Max. load mass (N)		
		M <sub>x</sub>	M <sub>y</sub>	M <sub>z</sub>	F <sub>x</sub>	F <sub>y</sub>	F <sub>z</sub>
APR-A (Internal guide type)	16	0.3	3.8	1.1	150	40	120
	20	0.8	11	3.2	320	80	250
	25	1.2	16	4.6	480	100	310
	32	2.4	26	8.0	660	130	400
	40	4.8	62	18	1130	240	730
	50	8.3	90	26	1420	330	990
	63	12	146	43	1760	420	1210
APR-B (External guide type)	16	2	5.5		240	200	
	20	5.4	16		490	420	
	25	7.4	23		640	480	
	32	14	34		840	620	
	40	29	81		1300	1170	
	50	49	120		1800	1500	
	63	73	210		2500	1940	
APR-C (LM guide type)	16	3.7	4.9			200	
	20	8.8	13			450	
	25	18	21			625	
	32	31	40			825	
	40	39	51			1650	

The above values show the allowable moment and allowable load values that can be applied at a speed of 0.2 m / s or less.  
For the values of the piston speed, refer to the graph.

[Example]

Load weight	$M_0 = 10\text{kg}$
Speed	$V = 0.5\text{m/s}$
Load center position	$S1 = 100\text{mm}$
	$S2 = 100\text{mm}$

The above example shows an example of calculation for checking the cushioning ability when selecting the cylinder bore size in the cylinder selection method.

# Cylinder Selection Method

## Selection of tube bore size

① Calculation of load

Find FZ from load weight to M0.

$$Fz = M_0 \times g = M_0 \times 9.81$$

② Static moment calculation

$$Mx = Fz \times S_3 \text{ (N} \cdot \text{m)}$$

$$My = Fz \times S_2 \text{ (N} \cdot \text{m)}$$

③ Total moment calculation

$$M_G = Mx + My \text{ (N} \cdot \text{m)}$$

④ Calculate required moment

The total moment MG is doubled.

$$M_N = M_G \times 2 \text{ (N} \cdot \text{m)}$$

⑤ Selection of cylinder bore size

Select the bore size of the calculated total moment MN that is close to the allowable moment MY.

[Example of calculation]

①  $Fz = 10 \times 9.81 = 98(N)$

②  $Mx = 98 \times 0.05 = 4.9(N \cdot m)$

$My = 98 \times 0.10 = 9.8(N \cdot m)$

③  $M_G = 4.9 + 9.8 = 14.7(N \cdot m)$

④  $M_N = 14.7 \times 2 = 29.4(N \cdot m)$

⑤ Cylinder bore size

APR-A (Internal guide type)

$\text{Ø}40(My = 62N \cdot m)$

APR-B (External guide type)

$\text{Ø}40(My = 81N \cdot m)$

APR-C (LM guide type)

## Allowable Moment

Check the static moment and the dynamic moment according to the selected cylinder and load zone.

### 1. Static moment

① With respect to the static moment MX, the allowable load Fz max (X1) of S3 in the following Table 1 is obtained.

$$Fz \text{ max}(X) = K1 \times Fz \text{ max}(X1)$$

[Example of calculation]

For APR-B(External guide type),

① For the static moment MY, the allowable load FZ max (Y1) of S2 in Table 2 below is obtained.

$$Fz \text{ max}(Y) = K2 \times Fz \text{ max}(Y1)$$

[Example of calculation]

For APR-B(External guide type),

Figure 1

Figure 2

Cylinder	K1
APR-A	0.5
APR-B	1
APR-C	1.5

Cylinder	S2(mm)	K2	Cylinder	K2
APR-A	0~20	0.6	APR-B	1
	20~40	0.5		
	40~60	0.4		
	60~80	0.3		
	80	0.2	APR-C	1.5

# Cylinder Selection Method

## Allowable Moment

### 1. Dynamic moment

- ① With respect to the dynamic moment MZ, the allowable load Fx max (Z1) of S3 in Table 3 is obtained.

$$F_{x \max}(X) = K3 \times F_{x \max}(X1)$$

[Example of calculation]

For APR-B(external guide type)

- ② For the dynamic moment MY, the allowable load Fx max (Y1) of S1 in Table 3 is obtained.

$$F_{x \max}(Y) = K3 \times F_{x \max}(Y1)$$

[Example of calculation]

For APR-B(external guide type)

- ③ Calculate the speed V, the load M0, the cylinder bore size (in cushion Sm), and the load Fdyn at rest to the end of stroke, in accordance with Table 4.

$$F_{dyn} = \frac{M_0 \times V^2}{2S} \text{ (N)}$$

[Example of calculation]

$$F_{dyn} = \frac{10 \times 0.5^2}{2 \times 57 \times 0.001} = 22 \text{ (N)}$$

Cylinder	K3
APR-A	0.5
APR-B	1
APR-C	1.5

Cushion Length (mm)	
Bore size	Cushion length(S)
16	11.5
20	27
25	32
32	40
40	57
50	60
63	65

## Sum of Guide Load Factors

### 3. Calculate % of the allowable values of static load (Fz) and dynamic load (Fdyn) respectively

$$\eta_1 = \frac{F_z}{F_{z \max}(X)} \times 100(\%)$$

$$\eta_2 = \frac{F_z}{F_{y \max}(Y)} \times 100(\%)$$

$$\eta_3 = \frac{F_{dyn}}{F_{x \max}(X)} \times 100(\%)$$

$$\eta_4 = \frac{F_{dyn}}{F_{y \max}(Y)} \times 100(\%)$$

[Calculation example]

$$\eta_1 = \frac{98}{265} \times 100 = 37(\%)$$

$$\eta_2 = \frac{98}{272} \times 100 = 36(\%)$$

$$\eta_3 = \frac{22}{940} \times 100 = 2(\%)$$

$$\eta_4 = \frac{22}{440} \times 100 = 5(\%)$$

$$\eta_1 + \eta_2 + \eta_3 + \eta_4 = 49 + 37 + 3 + 5$$

### 3. Combine the values from the above equation to see

Combine the values from the above equation to see if the value does not exceed 100.

If it exceeds 100%, increase the cylinder bore size, or check the allowable moment again with the LM guide type.

$$\eta_1 + \eta_2 + \eta_3 + \eta_4 \leq 100(\%)$$

# Cylinder Selection Method

## Cushion Capacity

In Table 5, determine the operating speed  $V$ , the allowable weight  $M_{max}$  of the cylinder bore  $D$ , and check whether the load weight  $M_0$  does not exceed  $M_{max}$ .

If  $M_0$  exceeds  $M_{max}$ , increase the cylinder bore size and install a shock absorber on the outside.

[Example of calculation

Speed  $V = 0.5\text{m/s}$ , cylinder bore size is  $\text{Ø}40$  Since  $M_{max} = 127\text{kg}$ , does not exceed  $M_0 = 10\text{kg}$ .
